

Placement Portal

The client's placement portal solution is aimed at automating the process for employee health assessment by collecting employees' personal & health information data.

Web pages got a better user interface which results in better usability for users. The application can be used in a multiuser environment with an extra layer of security added to the application using Captcha & 2 Phase Authentication. Also, PEN testing was carried out which results in secure Patient data which was stored.

Employees presenting for health screening
